Dear Terry,

Thank you for considering AVG software for your computer security needs. As an AVG Authorized Reseller, we are committed to providing you with the tools you need to protect your critical data, systems, and networks - freeing you to focus on your business.

AVG 8.5 is the first and only security solution to incorporate LinkScanner's unique protection against malicious web pages and drive-by download exploits by analyzing the page behind every hyperlink at the only time that matters – when the user is about to click on the link.

AVG's Active Surf-Shield and Search-Shield technologies ensure that your users cannot unwittingly allow web-borne threats onto your network while they're surfing and searching the web. Infections or infected web pages are often only present for a day or less, so competing solutions that rely on static databases can't see these transient, invisible and stop the threat before it can reach your network and start causing problems.

In addition to the LinkScanner protection, the AVG 8.5 product line-up includes the new AVG Identity Protection application, designed to prevent identity theft. While not yet available as part of our network-enabled products, you may find this a valuable addition to your business's security arsenal for mobile or telecommuting workers who are frequently online outside of your network.

AVG's award-winning anti-virus, anti-spyware, and firewall continue to keep spam, phishing attacks, and malware at bay. And Web Shield technology prevents infected files from being downloaded during instant messaging chat sessions.

The enclosed proposal details the importance of internet security protection and how the AVG product line will help to safeguard your company's digital lifeblood. As you review the enclosure, please feel free to call me if you have any questions. You can also visit www.avg.com for more information about AVG Technologies and the AVG range of computer security products.

We look forward to helping you keep your business secure against today's sophisticated cybercriminals – while still keeping within your budget.

Sincerely,

Arnold Romppai

Tough on threats. Easy on you.

Internet Security: A Business Imperative

Most individuals and organizations today are well aware of the dangers of computer viruses and their potential disruption to the business. A single infected e-mail that spreads a virus through an organization (and on to customers and suppliers) can have a major impact on productivity, revenue, and ultimately, business survival.

But not everyone is aware that cybercrime has become an organized online business in and of itself. Many hackers and other cybercriminals today have moved beyond viruses to create new types of malicious software programs that are delivered using the very environment that make business computing so rich and productive today – the world wide web. Increasingly sophisticated malware spies on PC users, intercepts data, and accesses networks to steal information that's critical to your business. Delivery mechanisms are hidden in seemingly-innocent web pages, and users need not even click on a page to get infected.

With this new generation of threats spreading across the web, it is vital that businesses adopt an approach to network security that acknowledges it's not just about viruses any more. Robust computer security needs multiple layers to take care of multiple threats. But it is also critical to remember that any security software is only a tool; if it's difficult to use or understand, it will not provide full protection and will leave the business vulnerable to attack.

Effective computer security must be easy to deploy, use, update, and manage. It must provide unobtrusive security for end users, whether or not they are connected to the network. And, most importantly, it must not get in the way of doing business.

The AVG Approach

AVG software is designed to deliver powerful yet manageable, cost-effective information security to businesses. Products are available to protect networks based around all major operating systems. Including Windows (2000/2003/XP and XP Pro x64/Vista) and Linux. AVG security software is designed across the board to be tough on threats and easy on you, providing:

- Protection against today's broad range of threats
- Real-time security while users are working on the web
- A small footprint requiring minimal system resources
- Integrated anti-virus & anti-spyware engine for faster scanning
- Remote administration for ease of management
- Automatic updates delivered as often as needed
- Free support and service around the clock and across the globe
- Protection that's certified by the leading independent testing agencies (VB100%, ICSA, West Coast Labs' Checkmark)

Tough on threats. Easy on you.

Recommended AVG Solution

Based on our discussions and your organization's needs, we propose the following solution:

AVG Anti-Virus Business Edition, 10 computers, 2 years: CND 459.99

For use on up to 10 computers

The software and its applications will be provided for a 2-year license period at a price of CND 46.00 per license.

AVG Internet Security, 3 computers, 2 years: CND 121.99

For use on up to 3 computers

The software and its applications will be provided for a 2-year license period at a price of CND 40.66 per license.

Your Technical Support

AVG Technologies and its employees have a personal stake in the security of their customers. Included with your AVG Internet Security software license(s), you will receive personalized, local service support from Romppai's who knows your network and understands your organization's needs.

Additionally, registered AVG users can obtain free, 24x7 e-mail access to AVG's own Technical Support team, along with expert consultation provided directly by AVG Technologies. More information and support request forms can be found at <http://www.avg.com/ww.support>.
