

**NEW!** Upgrade your Lenco digital trolling systems with a Wireless Remote Control.

164 lbs of digital trolling power provided by TWO transom mounted motors that will now operate not only with a hands free foot pedal, but with a wireless hand held remote control. The new remote control integrates directly with the foot pedal and control unit already included with your Lenco Troll'n Tabs or Lenco Drive 164.

Imagine being able to fish hands free by utilizing the Lenco foot pedal, and still having the freedom to control the system from another location on deck. Should you hook a fish, or need to step away from the pedal to cast to a fish you just spotted, you can still maintain complete control of your boat from whichever spot on the boat you end up.

Lenco's innovative ideas in trolling motor and trim tab development have now made it possible to keep your bow free of clutter AND give you care-free motor operation. The wireless remote is also perfect for non-fishing applications. Quiet, controlled operation of deck boats, larger center consoles, just about any boat not previously suited for electric trolling power can now be outfitted to open up a world of operating possibilities. The remote will be available as an option to be sold separately.

Every Lenco trolling kit will come standard with a digital foot pedal. The remote receiver plugs right in to the Lenco control box, and requires no alterations to the existing digital foot pedal system, including those previously purchased.
